PROJECTS

TicketMate - Public Transport E-Ticketing System (Level 2 Software Project - Mentored by Bistec Global)

The public transport-focused web application includes searching for trains and buses, reserving seats on trains and buses by making online payments, changing and canceling reservations with a refund, live tracking, emergency updates, registering vehicles and drivers, scheduling vehicles, and income prediction. This addresses the challenges in the public transportation system. In this project, I have developed the functionalities for searching for trains and buses, reserving seats, changing and canceling reservations, and managing passenger profiles.

Multi-Colour Wall Art Machine (Level 1 Hardware Project)

The designed hardware solution can create an image on the wall or fabric using colors. We have built a machine that will create the image on a wall or fabric which was input through a laptop, the height and width are entered, and the art or design is drawn on the wall or fabric by spraying the ink from the nozzles. This can make quick and cost-effective artwork.
